

# R script to Rmd

Ingo Rohlfing

2021-10-06

## Intro

This is a simple Rmd-script that is used to illustrate how it can be transformed into a plain R script.

### First some code

Load some toy data.

```
# load some data  
data(mtcars)
```

The dataset has 32 rows (to have some inline code).  
And let's a plot of *miles per gallon* (mpg) against weight (wt).

```
plot(mtcars$mpg, mtcars$wt)
```
